2007:

Who's  
Really Hot?

**MCCORMICK SYSTEMS**  
Chandler, Ariz.

[www.mccormicksys.com](http://www.mccormicksys.com)

**The electrical contracting market** is evolving and McCormick Systems, [www.mccormicksys.com](http://www.mccormicksys.com), Chandler, Ariz., can help professionals make the appropriate adaptations to modern business practices.

The provider of estimating software for electrical contractors recently unveiled its line of ABS (automated building systems), covering CAD (computer-aided design) estimating; time and material billing; and change orders for electrical contractors entering such budding areas as automated home technology and building control automation. While some electricians enter these new areas using their standard estimating and take-off tools, McCormick has gone the extra mile to rollout a complete line of products exclusively addressed at the specifications of this work.

Yet the ABS line isn't just a rework of its existing products. Rather, McCormick has custom built a new set of solutions ideal for companies in all phases of ABS work—whether as a start-up, a small extension of current services, or a full ABS specialist.

ABS is just the latest example of McCormick's commitment to meeting the demands of its growing customer base. As the only electrical software provider to be named "hot" in both the commercial and residential markets, the editors of *Constructech* believe McCormick serves electrical contractors in a highly unique manner.
