## HEATING UP DURING THE COOL DOWN

Residential's Hottest Companies have  
what it takes to ignite your business.

**MCCORMICK SYSTEMS**  
Chandler, Ariz.

[www.mccormicksys.com](http://www.mccormicksys.com)

**McCormick Systems,** [www.mccormicksys.com](http://www.mccormicksys.com), Chandler, Ariz., knows electrical contracting. The company, which provides a broad set of estimating and takeoff tools, understands that higher estimating productivity provides these firms with the ability to bid jobs accurately; allows current staffs to work more efficiently; and focuses estimating time on how the job will be built.

Listening to the needs of its customers, the company provides technology that fits real-world challenges. For example, its proprietary CAD (computer-aided design) estimating interface allows contractors to estimate their installations working directly from the CAD drawing supplied by architects and engineers.

In 2006, McCormick continued its run of supplying customers with new and innovative technology through the release of ABS (automated building systems). This set of CAD-estimating, time and material billing, and change order technology is ideal for electrical contractors entering such budding areas as automated home technology. Whether as a start-up, a small extension of current services, or a full ABS firm, ABS is ideal for all companies engaged in this work.

McCormick truly understands the challenges of the electrical contracting industry and is the only electrical software provider to be named "hot" in both the commercial and residential market.
