**Sage Timberline & McCormick Systems  
Make Beautiful Music Together  
– For Electrical Contractors!**

Electrical contractors now have an integrated combination of accounting and estimating software by using products from McCormick Systems and Sage Software.

McCormick's electrical estimating software (Win 3000, Win 6000, Win 8000 and Win 12000 and additional products) and automated building systems products (ABS 3000, ABS 6000, ABS 8000 to ABS 12000 and more) are fully integrated with Sage Timberline Office.

***What this means:*** Contractors who use the two software products won't have to jump through hoops to get them to work together. The interface is seamless and natural (as if all the software came from one company).

Integrating data is simple to accomplish. Users can transfer critical information from McCormick's software to Sage's system.

"Construction companies today are in serious need of integrated IT systems," said John Geffel, Sage Software senior vice president and general manager, Construction and Real Estate division.

"The interface between our products and those from McCormick enables electrical contractors to achieve this by purchasing software that provides integration right out of the box."

Added Todd McCormick, president of McCormick Systems: "Our interface with Sage's Timberline software makes life easier for contractors and their people. This fits with our company focus – which has, since our founding in 1979, been on helping contractors improve their productivity. That's still the case."

***About McCormick Systems***

Privately owned McCormick Systems, of Chandler, AZ, is the nation's leader in software used for electrical estimating and project management. The company's products enable contractors to produce consistent, profitable estimates for electrical and voice-data-video work.
