

# ESTIMATING SYSTEMS

CAD ESTIMATING FOR WINDOWS

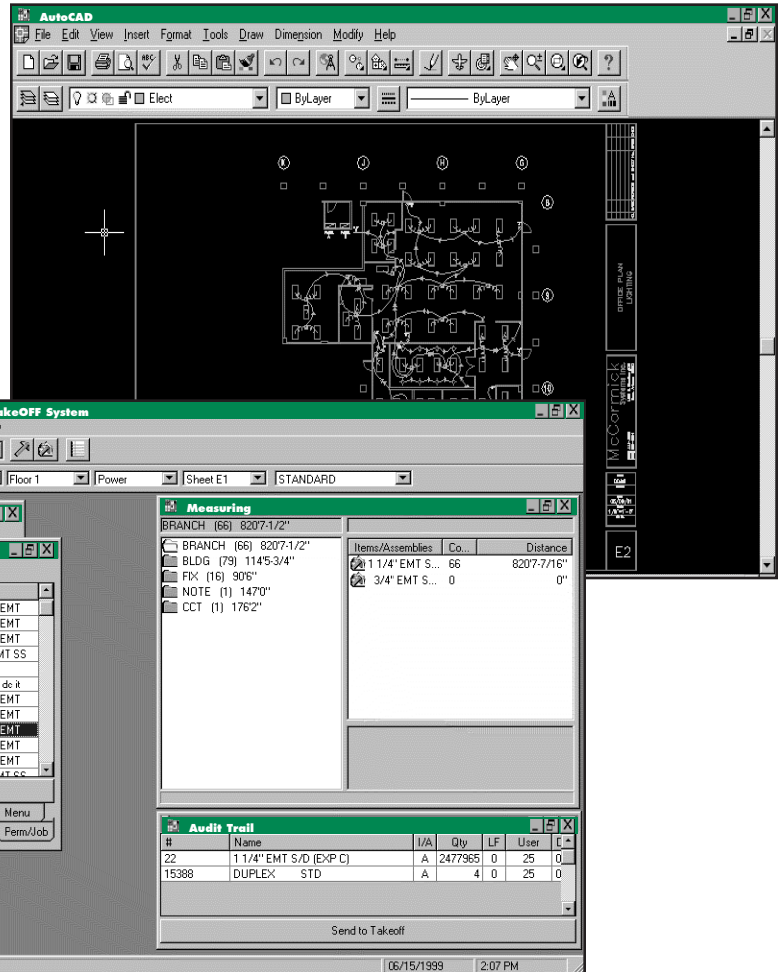

## From The Nations Leader in Estimating Software!

McCormick's AutoCAD®  
Interface for McCormick  
Estimating Software Users. Just  
pick the drawing or drawings  
and let the automated takeoff  
process track changes in  
the AutoCAD® drawings. This  
user friendly interface is an  
intelligent program that learns  
as it goes.

### Highlights Include:

- Directly interfaces with McCormick Estimating programs
- Automated takeoff of AutoCAD® drawings
- Intelligent program that learns as it goes
- Tracks changes in AutoCAD® drawings
- User friendly interface

AutoCAD® is a registered trademark  
of Autodesk, Inc.

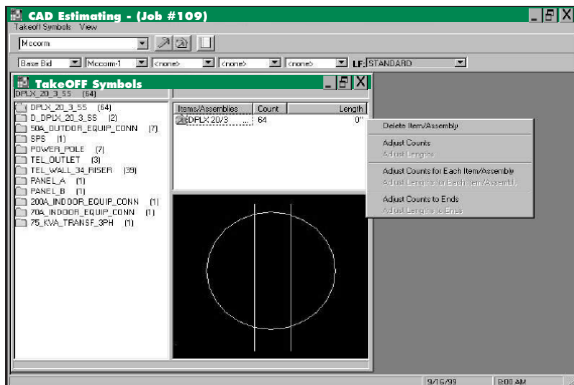

## Jobs

Interfaces easily with the systems you are familiar with. Create the jobs as normal in the Windows Estimating System. Open the CAD Estimating System and all jobs created using the Windows Estimating System are available for takeoff. Attach an AutoCAD® drawing to the selected job and you are ready for the easiest takeoff you have ever done. Uses the same user security.

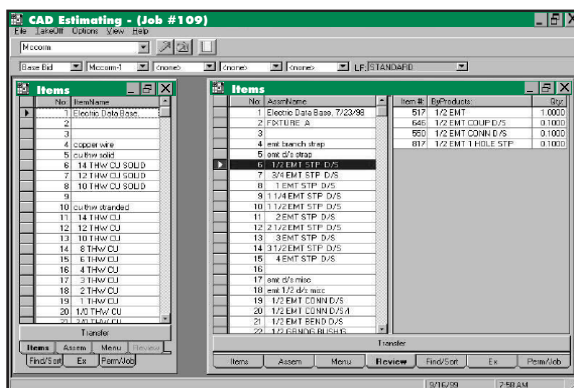

## Takeoff Lengths

No measuring or missed runs. Add the home runs and the drops and your done. If Lengths are drawn on separate layers, Automatic Takeoff may be selected measuring the drawing automatically. Choose the home runs to be measured either end to end or end to squared off. Choose the number of additional to add the ends, and the drops down the wall for each length to be added.

## Takeoff Symbols

No more manual counting of Items and Assemblies. Auto Takeoff uses Takeoff Symbols that are linked to specific Items and Assemblies. All the symbols (switches, receptacles, light fixtures, etc ) are identified, read, and counted. If the Items and Assemblies are already attached to the symbols, they are automatically taken off and added to the Audit Trail.

## Items and Assemblies

Just pick them out of your estimating system or paste from other jobs. The CAD Estimating System uses the same Items and Assemblies used in the Windows Estimating System.
