REVIEW AND TRANSFER

Whether on a PDA or Pocket PC, our Remote Takeoff Module puts the Power of McCormick's Estimating Software in the Palm of your Hand.

Estimate data in the field and Sync the changes to your desktop system back at the office or your field notebook.

Jobs

A Job list may be imported from your McCormick's Windows Estimating System, or a new job may be created on your PDA.

Labels

Create Labels or breakouts on your PDA that will link to McCormick's Estimating System.

Takeoff (Counting)

Lump sum Items or Assemblies may be taken off and added to your PDA Audit Trail either by entering the quantity or using the count button. By pressing the "+" button, Negative takeoff may be entered.

Items and Assemblies

All of your Items and Assemblies are available on the PDA for takeoff. Job Assemblies may be taken off and modified later in McCormick's Windows Estimating System.

Audit Trail

View the Audit Trail as a full screen or a split screen at the bottom of the takeoff window. Quantities may be modified or deleted and, like Items and Assemblies, may be combined to show a total count.

Review and Transfer

The Audit Trail may be reviewed and then synced to McCormick's Windows Estimating system. All of McCormick's Windows Estimating features will then be available for the finalization of the Estimate.
