ESTIMATING EFFICIENCY

For construction professionals, having a solid estimating and digital takeoff tool is key to improving accuracy. This is where McCormick Systems' new Design Estimating Pro comes into play, creating an estimating and digital takeoff program in one. With the product, contractors can upload PDF plans to the estimating software, set a customizable scale, then measure, count, and design directly on the PDF drawing. Built-in assemblies, labor units, and pricing allows contractors to place devices and fixtures, draw pipe runs, excavate, and perform any other estimating task. This product stands out due to the fact that it was built directly into the legacy estimating software, meaning it does not use an export method between the two programs.
